

March 28, 2016

Alabama: Temperatures were average to a few degrees above average for most of the State. Precipitation was also slightly above average for this time of the year with some reports of significant rainfall. A few farmers have already started planting corn, but the majority will hold off until the first week of April due to wet conditions. Topsoil and subsoil moisture was adequate to surplus. For the most part, wheat, pasture, and hay land are in good condition. Precipitation estimates for the month ranged from 2.62 inches in Auburn to 10.11 inches in Mobile. Average mean temperatures for the month ranged from 55°F in Decatur to 63°F in Mobile.
