

2012 California Almond Acreage Report

California Department of Food and Agriculture, California Agricultural Statistics Service

Cooperating with the USDA, National Agricultural Statistics Service, Pacific Region Office

Pacific Region Office · P.O. Box 1258 · Sacramento, CA 95812 · (916) 498-5161 · (916) 498-5186 Fax · www.nass.usda.gov/ca

Released: April 25, 2013

Revised: Page 5 correction to Aldrich and Butte varieties

RESULTS

California's 2012 almond acreage is estimated at 870,000 acres, up 4 percent from the 2011 acreage of 835,000. Of the total acreage for 2012, 790,000 acres were bearing and 80,000 acres were non-bearing. Preliminary bearing acreage for 2013 is estimated at 810,000 acres.

Nonpareil continued to be the leading variety, followed by Butte, Carmel, Monterey and Padre.

Kern, Fresno, Merced and Stanislaus were the leading counties. These four counties had 63 percent of the total bearing acreage, down slightly from the previous year.

OBJECTIVES

The Pacific Region Office of the USDA's National Agricultural Statistics Service (NASS) conducts an annual acreage survey of California almond growers. The purpose of this survey is to provide annual almond acreage with information on new plantings and removals. It is a continuation of a long series of industry funded almond acreage surveys.

Users are cautioned that this report consists of two parts:

- Estimated almond acreage -- bearing, non-bearing, and total.
- Detailed data by variety, year planted, and county -- as voluntarily reported by almond growers and maintained in the NASS data base.

With perfect information, the estimated almond acreage and the detailed data would be the same. However, differences exist for the following reasons:

- A voluntary survey of approximately 6,000 almond growers is unlikely to ever attain 100 percent completeness.
- It is difficult for USDA, NASS to detect growers that are planting almonds for the first time.

The detailed data reflects tree removals from over 10,000 acres (mostly older trees) during the past twelve months. Of this number, a significant amount of acreage was harvested in 2012 prior to being pushed out, and that acreage has already been removed from the detailed data.

PROCEDURES

The major source of the almond detailed data was a questionnaire mailed to all almond growers included on the NASS data base. The mailing was made in early October 2012. The questionnaire contained previously reported crop, variety, and acreage information preprinted. Producers were asked to update the information with new plantings, removals, and any other corrections; new growers were mailed a blank questionnaire. Growers were given six weeks to respond by mail. Telephone and field follow-up was then undertaken. Data collection ended in April 2013.

To arrive at the estimated almond acreage, the NASS almond acreage data base was compared with pesticide application data maintained by County Agricultural Commissioners and the California Department of Pesticide Regulation.

ACKNOWLEDGMENTS

The USDA, NASS, Pacific Region Office sincerely appreciates the many farm operators, owners, and management firms providing the information. A special thanks is due the Almond Board of California for funding.
