USDA forecasts corn and record soybean yields for New York

ALBANY, NY --- The USDA-NASS has released the crop production forecast for September, according to Charles Walker, state statistician of the USDA's National Agricultural Statistics Service (NASS), New York Field Office. The latest survey was conducted during the last week of August and the first week of September.

Corn production is forecast at 99.2 million bushels, up 23% from 2022. Based on conditions as of September 1, yields are forecast to average 164.0 bushels per acre, up from the 2022 average. Area harvested for grain is forecast at 605 thousand acres, up 5% from 2022.

Soybeans production is forecast at 18.3 million bushels, up 25% from 2022. Based on September 1 conditions, yield is forecast at 53.0 bushels per acre, up from last year. Area for harvest is forecast at 345 thousand acres, up 6% from 2022.

Production forecasts are released on a monthly basis and do not reflect final production estimates. The next production forecast will be issued October 12, 2023.
